Learning Target:

I can analyze and describe the clustering of services in the Central Business District of Cities. And, explain different types of urban patterns in terms of usage.

Essential Question:

- Why do services cluster downtown?
- Where are people distributed within urban areas?

1. Consider the EQs and Figure 13-2 and answer the following introduction questions on urban planning.
   a. Historically speaking why did cities develop and cluster services in urban areas?
   b. As cities have evolved over time, how do settlement patterns reflect the value of urban life?
   c. What does the pattern in Figure 13-2 say about the distribution of services within a settlement’s Central Business District?

2. Figures 13-9 through 13-11 show the most basic models for urban development in the developed world. For now, you just need to make reference to each zone. (We will practice with graphical representations later) For each of the following.
   a. List each Zone
   b. Describe what each zone represents
   c. Explain each zone’s representation

3. Each of these urban planning models were developed over time. Gradually, (following in numerical order 9-11) each new model was added to the old. Figures 13-12 through 13-14 use the city of Houston to help explain how each of these urban planning models is often useful in the same city.
   a. How does Houston represent the Concentric Circle Model?
   b. How does Houston represent the Sector Model?
   c. How does Houston represent the Multiple Nuclei Model?
   d. Why is showing each model more accurate than applying only a single model for urban development?
   e. Why does figure 13-17 seem to explain city development to be very different in developed European Cities as opposed to the United States? What would explain this trend?

4. Figure 13-18, 13-22 and 13-23 look at urban planning and the historical development of cities in the developed world using Mexico City as the Model. Answer the following
   a. Describe the settlement patterns in the Latin American City Model?
   b. How does this appear to very different form North Anglo American Cities?
   c. How can you see the existence of pre-colonial settlement patterns and modern settlement patterns in both the Latin American City Model and Modern Mexico City?

5. Kuby Lab Chapter 9 activity 2

Performance of Understanding: Using the examples in IL 7.3

1. Describe the different services present in urban areas and the distribution these services have in the CBD of the City
2. For each of the 3 Urban Planning Models
   a. Describe the distribution of zoning
   b. Explain how these zones make sense in the real world.
